ADDITIONAL CARE AND MAINTENANCE INFORMATION PLEASE READ CAREFULLY

Your Bathtub has been resurfaced by Surface Renew using the most up-to-date techniques and the highest quality coatings.

The key to getting a long lasting finish is to keep water off of the bathtub when you are not using it. Water will eventually wear away any finish. In most cases, water is what wore away the original finish on the bathtub. The tub should dry out after each use.

There are a few things that you will want to do to ensure a long lasting finish:

1. Do not use a rubber mat. If you wish to use a bathmat - use a vinyl bathmat. You need to make sure that the mat is taken up after each use. This will allow the tub to dry out. Failure to pick up the bathmat after each use will cause water to be trapped on the tub for long periods of time.
2. Make sure that shampoo bottles etc. are not left on the bathtub. Use a "shower caddy" that hangs over the shower head to keep bottles off the bathtub. As with a bathmat – a shampoo bottle left on the tub will trap water on the tub.
3. Have leaky faucets repaired immediately.
4. Use cleaners the say "Safe for acrylics" or use cleaners that say "Safe for all surfaces" when cleaning.
5. The following bathroom Cleaners are great to use:
Tilex – Scrub Free – Mr. Clean – Clorox – Lysol
6. You should NOT use abrasive cleaners like Comet, Ajax or Soft Scrub.
7. You should NOT use Scrubbing Bubbles or other petroleum based products.
